

GC – Coin Nozzles

FLAT FAN COIN NOZZLES

GC series coin nozzles with thickness 3.4 mm have a special thin coin-edge design. They do not protrude out of a pipe surface and their jet is close to the turbulence structure. They can be aligned in narrow spaces and easily cleaned.

Within the delivery pipe these nozzles are assembled to, a rotating steel brush takes off all the dirt, which is washed out by water and then flushed through a release valve positioned at the end of the pipe.

The revolutionary design of our coin nozzles makes them easy to clean and remove thus favoring a greater efficiency and productivity of the industrial plant they are used in.

Characteristics

- **Thread:** 5/8-18 UNF
- **Spray angle:** 45 – 80°
- **Capacity:** 5.1 – 9.5 L/min
- **Materials:** AISI 303, AISI 316

Typical applications:

- ✓ woolen blankets cleaning in paper mills,
- ✓ filter cloth of sludge dewatering machine cleaning.
